## **CENTRE FOR ADVANCED STUDIES & RESEARCH**

Centre for Advanced Studies & Research (CASR) embodies the spirit, ethos & vision of RBBSU and aims to be the exemplar of & set enviable precedents in knowledge creation, banking & dissemination in advanced studies & research.

The centre envisages nurturing need-based, demand driven, quality research culture that translates into outcomes/ deliverables i.e skill sets or products that positively influence our lives & livelihood. The CASR effectively facilitates & oversees research at all levels of courses/ curricula including PhD programs, helping develop & review intra & extramural studies & projects along 'Thrust areas' as identified by agencies/ bodies that fund or sponsor research. The centre thus plays a pivotal role in generating research aptitude among students & teachers alike and helps showcase research outcome at informed fora & journals of repute.

The CASR is also in liaison with credible international agencies/ institutes, namely, United Peace Keepers Federal Council ( UNPKFC), Thailand, Lumbini Buddhist University, Nepal, for collaborative initiatives & exchanges in areas of advanced learning & research.

# PROLOGUE

---

Writing a need-based demand-driven quality research project on 'thrust area' themes highlighted by sponsors & funders requires experiential knowledge & cultivated skill besides disposition & aptitude for research.

A project is a temporary endeavour & has deliverables in terms of product / service/process, also scientific research-over a fixed period, cost and other limitations.

Accordingly, the scope & parameters in a project design may not be limited to merely asking a research question and validating it; the process & outcome indicators in implementation of a project often involve & service people, aiming to positively influence quality of their lives (QOL) in terms of tangible benefits.

While research methodology reasonably prioritizes quantitative designs with objectively verifiable data, the need to factor-in subjective variables including 'lived experience' through qualitative designs, is of immense importance in effectively & comprehensively answering a research question. This is, as we know, not without its challenges.

The workshop aims at an interactive, participatory discourse with hands on practicums, group dynamics & experiential input from exemplars on essentials of designing a research project proposal, also offer carefully curated sessions on qualitative designs- an increasingly important & felt need in health & social science research.
